

Discovery Hub ®

# THE NEXT GENERATION OF DATA MANAGEMENT

Did you know?

80%

of data scientists' time is spent on data preparation\*

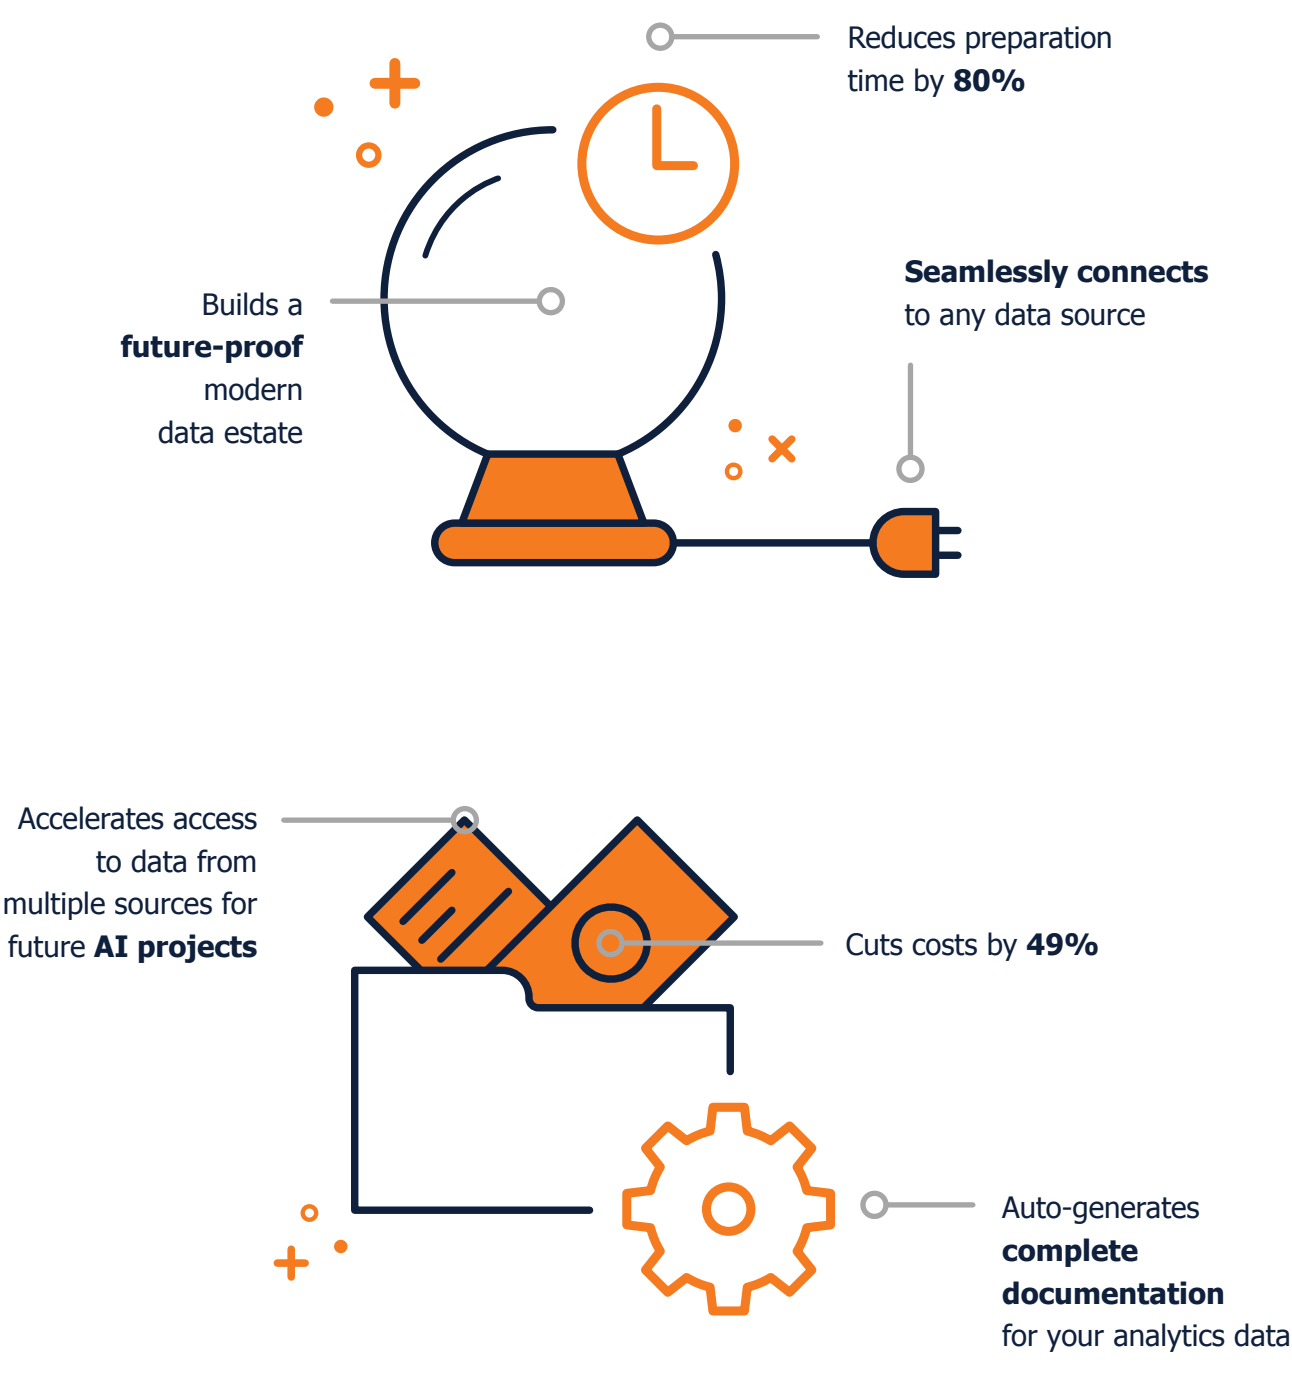

98%

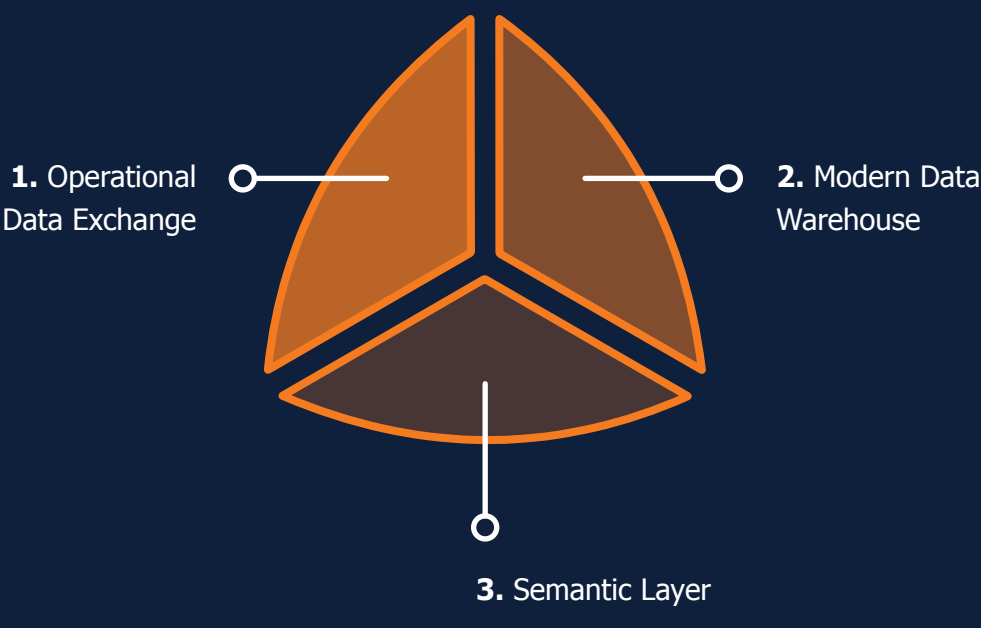

believe preparation and aggregation of large data sets in a timely fashion is a major challenge\*

\* 2016 survey of Data Scientists

Introducing Discovery Hub®

The Discovery Hub® has three components

Three components

- 1. Operational Data Exchange: access to all data of likely value**
  - Ability to connect to the ever-growing and ever-changing number of data sources
  - Add new data sources while maintaining governance, security and compliance
  - Agile and seamless data access
  - Supports the needs of data scientists with all data on a single platform
- 2. Modern Data Warehouse: understanding and trust**
  - Data is improved, enriched and consolidated
  - Data available in a format that business users can understand
  - Represents a single version of the truth
  - Capture how records change over time (historical records)
- 3. Shared Semantic Layer: one version of the truth for Power BI, Tableau & Qlik**
  - With the shared semantic layer, governed models are defined once, and then automatically used to deliver data in the right form and context to Power BI, Tableau and Qlik
  - Ability to easily switch between multiple visualization tools, avoiding the need to build models from scratch
  - Overcome the challenge of combining legacy data with new data
  - Retain the freedom to select any visualization and reporting tool
  - Achieve true self-service analytics – all challenges related to accessing meaningful and trustworthy data

TimeXtender inspires quality business decisions with data, mind and heart.

WE DO THIS FOR 1 SIMPLE REASON:  
BECAUSE TIME MATTERS.
